ArtemisUAV

Autonomous Defense Systems

Product Catalogue

About Us

ArtemisUAV

- ArtemisUAV develops AI-driven autonomous aerial systems engineered for modern battlefield operations.
- Designed for precision. Built for endurance. Developed for operational superiority.

Core Capabilities:

- AI Autonomy
- Multi-Platform Integration
- Secure Encrypted Communications
- GPS-Denied Navigation
- Modular Payload Systems
- Localized AI Model Training
- Rapid Field Deployment

ArtemisUAV

Drone-in-a-Box System

Role

Autonomous persistent surveillance and rapid-response deployment system.

Use Cases

Perimeter Security

Area Surveillance

Critical Infrastructure Monitoring

Routine Inspections

Drone-in-a-Box System

ArtemisUAV

Operational Profile

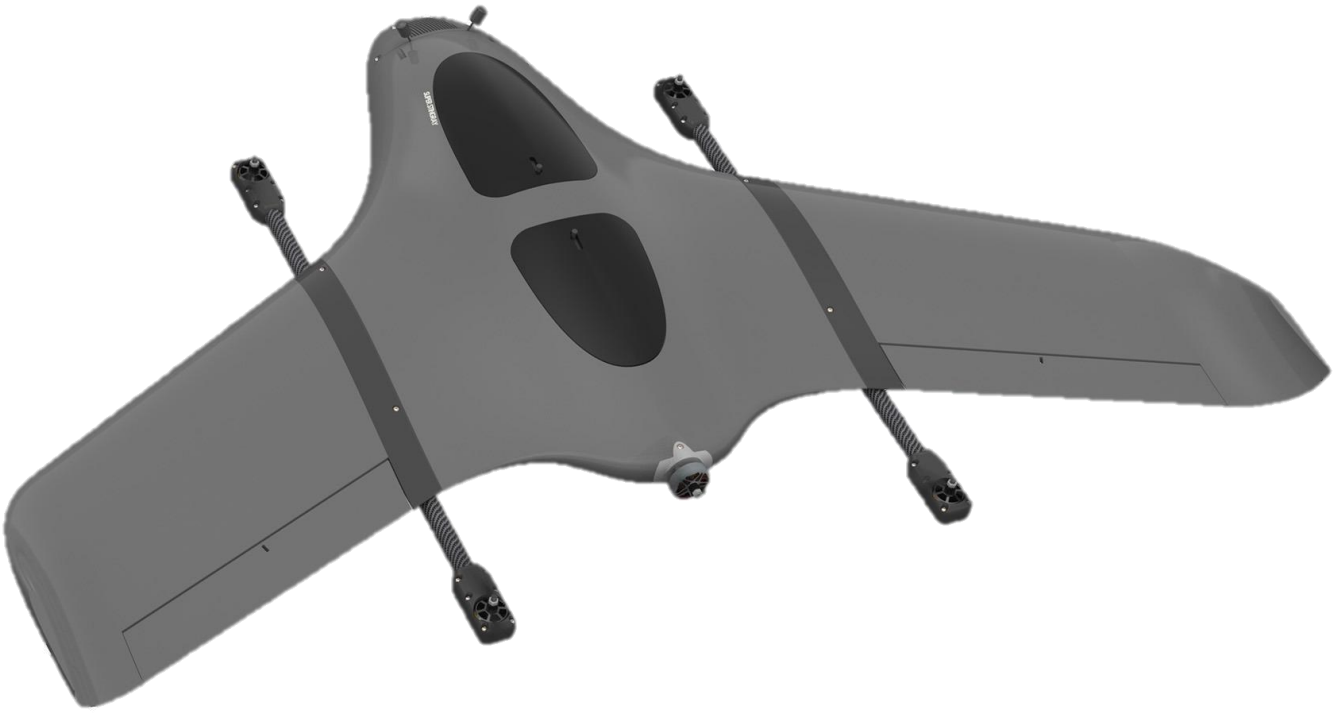
Flight Endurance	Up-to 45mins
Propulsion	Electric
Maximum Altitude	3000m
Communication Range	Up-to 30Km
Cruise Speed	50 km/h
Payload Options	Daylight / Thermal Camera Payload Dropper (optional)

Autonomy System

Docking	Auto Docking
Autonomous Features	Auto Launch & Auto Land
Autonomous Navigation	Waypoint Navigation
AI Features	Anomaly detection Vehicle/ Person Track & Trace Custom Features (Optional)
System Integration	Integrates Into Existing Infrastructure And Provides Realtime Data
System Readiness	24/7 Operation

ArtemisUAV

NIGRAN R3H



Role

Extended-range ISR platform combining VTOL flexibility with fixed-wing efficiency

Use Cases

Wide Area Terrain Scanning

Deep-zone reconnaissance

Convoy aerial escort

Maritime coastal monitoring

NIGRAN R3H

ArtemisUAV

Operational Profile

Flight Endurance	Up-to 3 Hours
Propulsion	Electric
Maximum Altitude	3000m
Communication Range	Up-to 30Km
Cruise Speed	70-90 km/h
Payload Options	Daylight / Thermal Camera Laser Range Finder (optional) Payload Dropper (optional)

Autonomy System

Autonomous Features	Auto Launch & Auto Land
Autonomous Navigation	Waypoint Navigation
AI Features	Anomaly detection Vehicle/ Person Track & Trace Custom Features (Optional)
System Integration	Integrates Into Existing Infrastructure And Provides Realtime Data

ArtemisUAV

ZULFIKAR D4

Role

Autonomous aerial platform engineered for precision payload deployment in dynamic battlefield environments. Designed for controlled, high-accuracy release with real-time trajectory intelligence and environmental compensation.

Use Cases

Precision payload deployment

Tactical support operations

Elevated drop missions

Coordinated strike support

ZULFIKAR D4

ArtemisUAV

Operational Profile

Payload Capacity	Up-to 4.5 kg
Endurance	Up-to 35mins
Propulsion	Electric
Max Altitude	2000m
Deployment Mode	Precision Release

AI Deployment System

Trajectory Analysis	Real-Time AI Modeling
Wind Compensation	Dynamic Drift Correction
Target Lock	Vision-Based Tracking
Release Mechanism	Controlled Mechanical Actuator
Sequential Drop	Supported
Multi-Drone Sync	Compatible

ArtemisUAV

TRAINER DRONE

Role

Low-cost resilient training drone engineered for skill development, tactical simulation, and controlled pilot instruction.

Use Cases

Pilot skill development

Tactical maneuver training

Indoor flight drills

Operator certification programs

Simulation-based exercises

TRAINER DRONE

ArtemisUAV

Operational Profile

Flight Mode	FPV/ Manual / Stabilized Assist
Max Speed	60–80 km/h
Endurance	Up-to 20 mins
Propulsion	Electric
Protection	Full Propeller Guard System
Structure	Impact-Resistant Housing

Training System

Skill Levels	Beginner to Advanced
Control Scaling	Progressive Sensitivity Adjustment
Indoor Compatibility	Yes
Crash Survivability	High
Component Replacement	Modular & Quick Swap

ArtemisUAV

Flapping Bird

Role

Low-visibility surveillance system designed for covert intelligence gathering in sensitive or high-risk zones.

Use Cases

Covert reconnaissance missions

Urban intelligence gathering

Low-visibility surveillance

Sensitive zone monitoring

Perimeter observation tasks

Flapping Bird

ArtemisUAV

Operational Profile

Flight Endurance	Up-to 25 mins
Propulsion	Electric
Maximum Altitude	100m
Communication Range	5Km
Payload Options	Daylight/Night Vision Camera

Operational Overview

AI Features	Anomaly detection Vehicle/ Person Track & Trace Custom Features (Optional)
System Integration	Integrates Into Existing Infrastructure And Provides Realtime Data

ArtemisUAV

GPS DENIED NAVIGATION

Role

Autonomous navigation module designed to maintain positional awareness and flight accuracy in GPS-denied, jammed, or spoofed environments.

Use Cases

GPS-denied operations

Anti-jamming resilience

Electronic warfare zones

Urban canyon navigation

Signal-disrupted missions

ArtemisUAV

GPS DENIED NAVIGATION

Navigation Profile

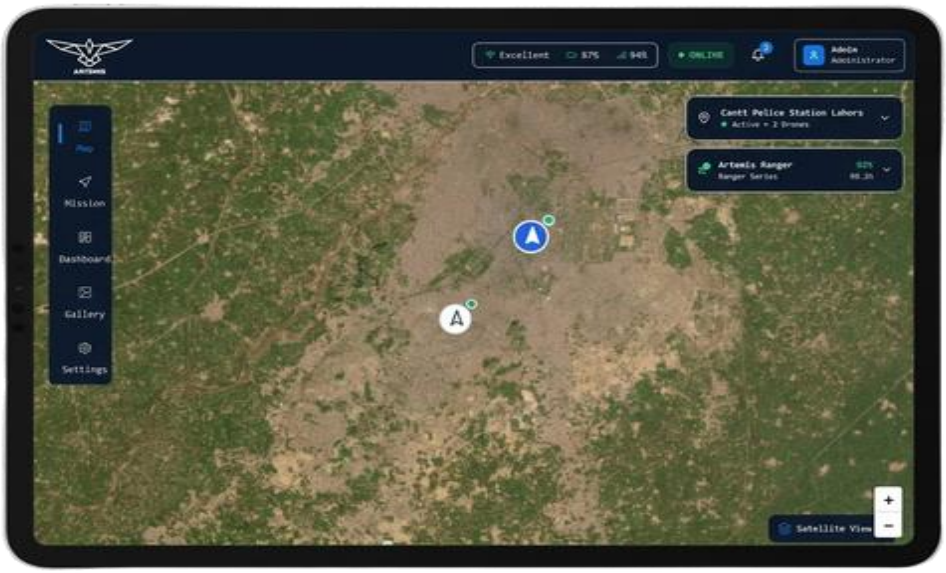
Mode	Vision-Based Localization
GPS Dependency	Not Required
Takeover Trigger	Automatic on Signal Loss
Sensor Fusion	IMU + Optical + Barometric
Terrain Mapping	Tile-Based Image Comparison
Position Correction	Real-Time Recalibration

Electronic Resilience

Anti-Jamming	Enabled
Anti-Spoofing	Enabled
Operational Environment	GPS-Denied Zones
Platform Compatibility	All Artemis UAVs
Integration	Any Mav link Supported UAV

ArtemisUAV

AI –Powered C&C SOFTWARE



Role

Centralized AI-driven software environment for swarm-drone mission coordination and battlefield awareness.

Use Cases

Swarm-drone fleet management

Encrypted live video feeds

AI mission planning & execution

Real-time telemetry dashboard

Automated alert generation

ArtemisUAV

SHAHED

Role

Long-range precision strike platform for high-value target engagement.

Use Cases

Long Range Pression Strike

SHAHED

ArtemisUAV

Operational Profile

Flight Endurance	Up-to 2.5 Hours
Propulsion	Fuel
Maximum Altitude	3000m
Strike Range	Up-to 250Km
Cruise Speed	120 km/h
Payload Options	Daylight / Thermal Camera Payload Up-to 3Kg

Autonomy System

Navigation	GPS Denied Navigation
Autonomous Navigation	Way-points
AI Features	Smart Target Locking
System Integration	Yes
